

Portfolio

Following are a few sites that we have had the pleasure of working on. Some have been in a consultancy role. Some we have just worked on a particular part of the overall site. We give a small description of the work we did and invite you to ask us for any more details!

Please also take a look at our "Code and Contributions" page. It details actual products, such as web applications, that we have worked on, as opposed to web sites in general.

We would like to thank these sites for allowing us to list them as our clients. As we have mentioned elsewhere, we like to keep our client list quiet, but even we need to show a few of our wares!

GAMEparents

GAMEparents is a site devoted to gaming (game reviews, etc.) from a parental point of view. AsIs Technologies developed the game review module that is used on this site. Upon creating a game review, our code automatically creates a screenshot gallery and a forum thread. We also created a SOAP webservice to allow the reviewers to easily export their data from a dedicated Windows application, straight in to the web site.

Technologies Used / Developed:

- CMS: e107.
- Developed e107 module for creating, editing, displaying, searching and filtering game reviews.
- NuSOAP: used to create webservice interface between Windows application and server.

Off & Racing

offandracing.com is a horse racing enthusiast site. For this project, we wrote an e107 component that automatically downloads and parses upcoming races from our source site. We take all of the information (tracks, races, horses etc.) and store it all in the database. Any information about a particular horse or track, now, is linked to this data for a complete history.

Technologies Used / Developed:

- CMS: e107.
- Developed e107 module that automatically downloads and parses data and provides an API to access entire history of racing data.

MyTipper

MyTipper is a web based application that lets users easily set up and maintain sports tipping competitions (or sports pools). AsIs Technologies jointly developed the latest version of MyTipper with the team at Digital Ground, based in Sydney, Australia.

Technologies Used / Developed:

- PHP language based development.
- Optional e107 CMS plugin.

silvertails.net

This is a fan site for a Sydney, Australia, based NRL football team. The site provides an open forum for fans, as well as a photo gallery, a tipping competition and so on. AsIs Technologies is used in an ongoing basis by the site as a consultant for both technical (programming) issues as well as business (eg. advertising promotions) concepts.

Technologies Used / Developed:

- Consultancy work.

Horse Racing Australia

Horse Racing Australia and the Winform Racing Club provide practical punting information to members. AsIs Technologies mainly works on a consultancy basis with this company, providing technical information. Having said that, we also helped develop a time based member login and access system, as well as several standalone Microsoft Windows applications.

Technologies Used / Developed:

- Mainly consultancy work.
- PHP membership management system.
- MS Windows applications.
